Strava - Find new Routes!

However, searching for routes is tedious

Solution: Run Recommender with Strava API

Tools Utilized

Pandas

Flask

Methods

Authorize
Strava user

Tokens in
MongoDB

Get run
activity into
pandas df

Filter runs on
distance from
start location

Euclidean
Distance - top
20 runs

Group runs -
Hierarchical
Clustering
with Cosine
Similarity

Suggest 5
runs - drawing
from most
popular run
routes first

Website

<http://pnwrun.org>

Next Steps

- Continue with Website Development:
 - Fix scrolling
 - Layout/Design
- Continue Collecting tokens from runners
- Survey runners for feedback:
 - Diversity of runs
 - Meets request
- Search for points along route as possible start points
 - Currently use the identified start point of the collected run
